

## **FINAL RESOLUTION (IOPD XII, June 15, 2010 Rio de Janeiro, Brazil)**

The undersigned participants of the IOPD from June 14-15, 2010 in Rio de Janeiro, Brazil adopt the following declaration:

IOPD members wish to develop and promote a sound industry business environment that will allow oilseed producers the opportunity for viable and profitable ongoing returns.

IOPD members support concluding a WTO agreement as soon as possible that results in both developed and developing countries substantially increasing market access, substantially reducing trade-distorting domestic support, and eliminating export subsidies and other trade-distorting export practices.

IOPD members expect that the oilseed sector will be covered during the course of the negotiations, so that producers can benefit from a growing food and non-food market, resulting from progressing liberalization. IOPD members assume that successful negotiations will maintain profitable income for producers of oilseeds and protein plants.

IOPD members recognize the need to supply the world with increasing quantities of protein and vegetable oil. Toward that end, we support increased research and investment in the agriculture sectors of developing and developed countries.

IOPD members appreciate the progress achieved in the development of new areas of use for oilseed, vegetable oils and protein products, and support a sustainable development of environmental friendly products. IOPD welcomes the contribution of these areas of use and market stabilization.

IOPD members support timely, transparent, and science-based review and approval systems for all sustainable technologies, including biotechnology, of all oilseeds, vegetable oils and products. To avoid trade disruptions, IOPD members encourage the establishment of thresholds for the low level presence of biotechnology events in internationally traded commodities and products.

IOPD members endorse agricultural production systems that conserve and protect the environment while achieving the high levels of productivity necessary to meet increasing world wide demand, while maintaining producer profitability.

IOPD members are committed to sustainable agriculture production systems on suitable land for producing food, feed and non-food uses. Sustainable agriculture production systems will meet the needs of the present while improving the ability of future generations to meet their own needs by:

- Increasing productivity to meet all future needs while decreasing impacts on the environment.
- Improving access to safe food and feed and the production of fuel that improves air quality and reduces greenhouse gases.

- Improving the social and economic well being of agricultural producers and the global community.
